

Bifrost Language Models

An app for Microsoft Dynamics 365 Business Central, on Bifrost Foundation

BIFROST.
LANGUAGE MODELS

Your choice of AI model, inside Business Central's own routines and cards.

Bifrost Language Models lets Business Central itself use a language model: in automated routines, and in a chat panel on the cards where it helps to ask about the record in front of you. It is an add-on to Bifrost Foundation. To work with Business Central from the assistant you already use, such as Copilot, ChatGPT or Claude, Bifrost Foundation is all you need.

Code ↑	Description	Default	Chat Provider	Has Skill
AZURE-OPENAI	Azure OpenAI in our own subscription	☐	Azure OpenAI	☐
CLAUDE	Anthropic Claude	☐	Anthropic	☐
COPILOT	Microsoft Copilot (no API key needed)	☒	Copilot	☐

Choose your AI provider: Copilot, OpenAI, Azure OpenAI, Anthropic, Google Gemini, xAI or your own.

What it does

- Lets you choose the provider: Microsoft Copilot (no API key needed), OpenAI, Azure OpenAI, Anthropic, Google Gemini, xAI or your own model.
- Puts a model inside a routine: a scheduled task or playbook can ask a model to classify or summarise a document.
- Adds a context-aware chat panel on the cards where it helps: customers, vendors, items, sales and purchase documents, ledger entries and incoming documents. It already knows which record you have open.
- Answers from live figures: the model reads Business Central through Bifrost, with your own permissions, and every call is logged.

Who it is for

Administrators who want to choose which AI provider Business Central uses, teams whose routines need a model to read, classify or summarise, and users who want a quick question answered on the card they are working on.
